San Antonio, TX area • preahs.com • linkedin.com/in/preah-smith-510667253

SUMMARY

Security+ certified cybersecurity graduate with enterprise-scale technical support experience and a self-hosted infrastructure platform run with production discipline. Brings hands-on Linux administration, networking, monitoring, and secure remote access work, backed by strong documentation habits and steady escalation handling in high-volume environments. Currently completing the CCNA and building toward cloud security.

TECHNICAL SKILLS

Support & Operations: End-user support, ticket triage & escalation, ticketing & CRM platforms, bug reproduction & reporting, runbooks & SOPs

Systems & Virtualization: Linux (Ubuntu, Debian), Windows, macOS, iOS, Proxmox VE, LXC, Proxmox Backup Server

Networking: TCP/IP, DNS, DHCP, subnetting, firewalls, VPN (WireGuard, Tailscale, IPsec), Cloudflare Tunnels, network troubleshooting

Security: Zero-trust remote access, Wireshark, tcpdump, Nmap, Trivy, Gitleaks, MITRE ATT&CK, NIST 800-53 / CSF

Containers, CI/CD & Monitoring: Docker, Docker Compose, Git, Forgejo/GitHub CI, Ansible, Prometheus, Grafana, Alertmanager, Loki

Programming & Scripting: Python, Bash, JavaScript, PowerShell (basic)

EDUCATION

B.B.A. in Cybersecurity | *University of Texas at San Antonio*

Aug 2026

GPA: 3.75 • Relevant coursework: Network Security, Information Assurance, Linux & SQL, Cybersecurity Fundamentals

WORK EXPERIENCE

Technical Support Advisor | *Apple (Remote)*

Jan 2024 – Jul 2025

- First point of contact across Mac, iPhone, iPad, and Apple Watch, resolving 150+ cases weekly spanning hardware, software, OS-level, network connectivity, and account/access issues.
- Served as a subject matter expert and mentor, taking on escalated cases and guiding fellow advisors through complex troubleshooting.
- Triageed and routed incidents with clear, documented handoffs, and reproduced customer-reported defects to file bug reports with reproduction steps for engineering.
- Sustained a 97% customer satisfaction rating while managing cases end-to-end in a high-volume, fully remote, asynchronous environment.

Head Cashier | *The Home Depot, Boerne, TX*

Jan 2021 – Present

- Primary escalation point for customer issues and store technology failures, troubleshooting POS registers, self-checkouts, handhelds, printers, and network ports, and working with IT support during outages.
- Trained new staff on POS systems and compliance procedures while overseeing thousands of weekly transactions, reducing onboarding errors.
- Created a standardized closing checklist for head cashiers, eliminating recurring register-closing discrepancies.

CERTIFICATIONS

CompTIA Security+ (SY0-701), June 2026 • CompTIA A+ (220-1201 & 220-1202), January 2026 • Cisco CCNA, in progress

PROJECTS

Self-Hosted Infrastructure Platform | *Proxmox, LXC, Docker, Prometheus/Grafana, Cloudflare Tunnels, WireGuard, Tailscale*

- Operate a Proxmox host running 25+ containerized services across LXC and Docker, managing capacity, updates, and backups with verified restore testing.
- Deployed Prometheus, Grafana, and Alertmanager for infrastructure health and uptime, routing alerts through a self-hosted ntfy service.
- Secured administrative and external access without exposing inbound ports, combining Cloudflare Tunnels with WireGuard and Tailscale ACLs.
- Diagnosed a full host outage through out-of-band iDRAC access, traced it to a failed NIC port, and restored service by repointing the network bridge; documented fixes like this in incident runbooks.

CI/CD Pipeline with Security Scanning | *Forgejo, Trivy, Gitleaks, Docker Compose, Git*

- Run a self-hosted Forgejo instance with CI pipelines, keeping service definitions and infrastructure configuration under GitOps-style version control, mirrored to GitHub.
- Integrated Trivy image scanning and Gitleaks secret detection into CI, catching vulnerable dependencies and committed credentials before deployment.
